ABOUT ME

I am a results-driven Web Developer passionate about developing user-friendly web applications. I have spent most of my career unleashing untapped potential in organizations by creating tools to make work better. I pride myself on excellent problem-solving skills and the ability to perform well individually or in a team.

RECENT PROJECTS

2020 🔗 **Interview Scheduler**
REACT / NodeJS

Allows users to set up an interview for a day of the week based on interviewers available on the particular day.

2020 🔗 **Quiz App**
NodeJS / Express

An education-themed quiz app, where a user can create custom quizzes for a range of subjects, levels and/or toughness.

2019 🔗 **VEST**
NodeJS / Express

Uses the Ethereum Blockchain to pair limited-edition physical assets to a corresponding unique digital asset. The web app won First Place in UofT's Blockchain-focused Hackathon.

EXPERIENCE

Agile Test Engineer   **Nov 2020 - present**
TribalScale

Carried out regular testing of mobile and web applications, created bug reports, and worked with internal and external stakeholders throughout the lifecycle of a project. One of my core focuses was on leading the development of an automation testing framework for web applications, where I showcased the benefits of my recommended web testing framework (Cypress). Additionally, I also supported a transformation engagement with an external partner.

Digital Innovation Analyst   **Aug 2016 - Nov 2017**
Weston Foods

Collaborated with stakeholders from multiple functions to work on several business-process-improvement initiatives. Most importantly, I was able to defer over $1 Million in expenditure by owning the in-house development of a cross-functional tool to facilitate the commercialization of new product ideas from idea conception to putting the products on the shelf.

Procurement Analyst   **Jul 2015 - Aug 2016**
Weston Foods

In addition to the duties of a procurement analyst, such as negotiating with vendors and conducting internal and external analyses, I consolidated multiple data sources and moved the organizational function to a cloud-based reporting tool. This resulted in a single source of truth that increased year-over-year productivity by more than 3 times.

EDUCATION

Lighthouse Labs
2020 | Diploma Fullstack Web Development

University of Western Ontario, London, ON
2011-2015 | Bachelor's in Management and Organizational Studies
